GENERAL INC. 0310201.

GENERAL INCOMATION:

APPLICANT: Grandgenett, Duane P.

TITLE OF INVENTION: Method for Analyzing Concerted Integration of DNA Donor

TITLE OF INVENTION: Molecules into Target DNA and the Enzymes that Perform

TITLE OF INVENTION: Molecules into Target DNA and the Enzymes that Perform

TITLE OF INVENTION: Molecules into Target DNA and the Enzymes that Perform

TITLE OF INVENTION: Winners: US/09/253,977A

CURRENT FILING DATE: 1998-09-21

EARLIER PELING DATE: 1996-06-27

EARLIER PELING DATE: 1994-05-20

| Sequence 126, Application US/09479005A
| Patent No. 6656731
| GENERAL INFORMATION:
| APPLICANT: Ribozyme Pharmaceuticals, Inc.
| TITLE ROF INVENTION: Nucleic Acid Catalysts with Endonuclease Activity
| TITLE ROF INVENTION: Nucleic Acid Catalysts with Endonuclease Activity
| FILE REFERENCE: MBHB00-884-C
| CURRENT APPLICATION NUMBER: US/09/479,005A
| CURRENT FILING DATE: 1999-11-19
| PRIOR FILING DATE: 1999-11-19
| PRIOR FILING DATE: 1999-09-22

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         US-08-758-306-813/C

Sequence 813, Application US/08758306

Patent No. 5807743

GENERAL INFORMATION:
APPLICANT: Stinchcomb, Dan T.
APPLICANT: McSwiggen, James A.
ITLE OF INVENTION: METHOD AND REAGENT FOR THE
ITLE OF INVENTION: TREATMENT OF DISEASES
ITLE OF INVENTION: INTERLEUKIN-2 RECEPTOR
ITLE OF INVENTION: INTERLEUKIN-2 RECEPTOR
ITLE OF INVENTION: GAMMA-CHAIN EXPRESSION
NUMBER OF SEQUENCES: 1379

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 1,

Publication No. US20040241651A1
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Alexander Olek
APPLICANT: Christian Pepenbrock
APPLICANT: Kurt Berlin
TITLE OF INVENTION: Detection of single nucleotide polymorhphisms [SNPS] and cytosine
TITLE OF INVENTION: methylations
FILE REFERENCE: E01/1193/WO
CURRENT FILING DATE: 2002-10-07
PRIOR APPLICATION NUMBER: US/10/257,017B
CURRENT FILING DATE: 2000-04-07
PRIOR FILING DATE: 2000-04-07
NUMBER OF SEQ ID NOS: 382046
SEQ ID NO 117597

Sequence 120570, Application US/10257017B

Publication No. US20040241651A1

GENERAL INFORMATION:

APPLICANT: Alexander Olek

APPLICANT: Kurt Berlin

TITLE OF INVENTION: Detection of single nucleotide polymorhphisms [SNPs] and cytosine

TITLE OF INVENTION: methylations

FILE REFERENCE: E01/1193/W0

CURRENT APPLICATION NUMBER: US/10/257,017B

CURRENT FILING DATE: 2002-10-07

PRIOR APPLICATION NUMBER: DE 10019173.8

PRIOR PILING DATE: 2000-04-07

NUMBER OF SEQ ID NOS: 382046

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Max-Delbruck-Centrum fur Molekulare Medizin

TITLE OF INVENTION: Chimeric Oligonucleotides and the Use Thereof
FILE REFERENCE: 101195-24

CURRENT APPLICATION NUMBER: US/09/817,387

CURRENT FILING DATE: 2001-03-26

PRIOR FILING DATE: 1997-05-02

NUMBER OF SEQ ID NOS: 29

SOFTWARE: Patentin Ver. 2.1

SEQ ID NO 29

LENGTH: 6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Similarity 100.0%; Score 6; DB 9; Length 6; Similarity 100.0%; Pred.
